

Universe Engine TV - UX Scenario

Document version: 1.0 | App version: 0.0.1

1. App Overview

Universe Engine TV is a remote-friendly ambient visual app for webOS TVs. It provides three main modes: Solar System, Known Space, and Signature Screen.

2. Target Devices and Input

- Device requirement: None
- Remote support: Both Magic and general remote
- No gamepad, camera, gesture, or voice-only dependency

3. Navigation Model

- Left/Right or Up/Down: move focus between mode buttons
- OK/Enter: activate selected mode
- Back: return to home selection state

4. Primary User Flow

Step 1: User launches Universe Engine TV.

Step 2: Focus starts on Solar System mode.

Step 3: User switches between available modes with the remote.

Step 4: Preview panel updates with selected mode status.

Step 5: If user is idle, app auto-cycles modes like a screensaver.

5. Idle and Screensaver Behavior

When no user input is detected for the idle interval, the app enters auto-cycle mode. Modes rotate in sequence and status text updates accordingly.

6. Non-Functional Notes

- No account/login required
- No payment or subscription flow
- No in-app ads
- No adult content
- No personal data collection

7. QA Verification Checklist

- Launch app and confirm default focus state
- Verify remote navigation and mode activation
- Verify Back behavior
- Verify idle auto-cycle starts and rotates scenes
- Verify stability on 1080p and 720p package variants
